

NRGscapes
OCEAN AND SPACE

INVESTMENT

It is the intent of NRGscapes to seek funding to expand its business in partnership with industry

INTELLECTUAL PROPERTY

It is the intent of NRGscapes to develop intellectual property from its research and apply it in order to further develop its business interests

TECHNOLOGY TRANSFER

It is the intent of NRGscapes to transfer any technology development to industry

BUSINESS PLAN

It is the intent of NRGscapes to prepare a business plan

NRGscapes Statement of Intent October 2022

Our two key programs of research that underpin development of our business, commercial interests, and partnerships with key clients.

1. ANOMALOUS ORBS

NON-VISUAL SPECTRUM

Research program to better understand the link between nature, the electromagnetic spectrum, and the manifestation of anomalous phenomena.

2. ENERGY SYSTEMS

TECHNOLOGY AND HISTORY

Research program reviewing historical narratives on energy and anomalous phenomena through publications, books, papers and declassified information.

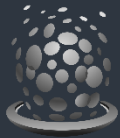

- Purchase mobile field laboratory setup for work in remote environments
- Purchase small building for equipment maintenance, office, and laboratory setup
- Purchase further equipment needed for laboratory set up and continue expanded field work
- Purchase secure site and larger building complex for developing the commercial application of ongoing research

PROJECT WORK

Hypothesis: If hyper dimensional phenomena can manifest anywhere at any time in the physical dimension, then it must transit physical space in the non-visible regions of the electromagnetic spectrum because the human eye is not able to observe it.

By reading and by observation we unravel what is before us:

- Nature – what you can't see matters
- History – what is not taught is key
- Energy – unlearn all you know

NRGscapes
OCEAN AND SPACE

SECURITY

It is the intent of NRGscapes to obtain the necessary security infrastructure arrangements to protect its commercial interests

PUBLIC PROFILE

It is the intent of NRGscapes to maintain a public profile about certain aspects of its business

TRANSPARENCY

It is the intent of NRGscapes to maintain a degree of transparency in its operations without compromising client confidentiality or its intellectual property rights

Partner with us and be ahead of the curve

The science written out of public knowledge is the science that holds the key to our future. We research anomalous aerial phenomena and the link between nature, energy systems, technology development and its commercial application.

In doing so we focus on industry partnerships interested in linking advances in natural resource access technology with the growing importance of understanding the interaction between living and nonliving planetary systems and sustainability on planet earth and beyond.

After years of research, teaching, consulting, and writing and publishing in industry magazines and science Journals I felt my creativity was being stifled by institutional dogma and the science of consensus. So, I left it all behind and it is the best decision I have ever made

Research Program

- Complete pilot study data analysis and interpretation of results
- Complete further field work to confirm results of pilot study
- Implement broader research program to underpin technology development
- Transfer technology to industry while continuing with underlying research program
- Acquire specialised equipment needed in the field and in a secure facility for ongoing research and its commercial application in industry

ABOUT ME

Significant background in natural resource consulting across fisheries and aquaculture, oil and gas, and the mining industry in environmental science and environmental management combined with experience in research, reports, presenting and provision of advice when working with the military, academics, government, and the education sector.
